- Docker, Elasticsearch, Redis
- Aws , Heroku
- Serverless api's

Education

Jamia Hamdard University
Bachelors in Computer Application
Had to Dropped Out due to Personal reason

June 2015 - Dec 2017
8.05 CGPA

Employment History

Backend Engineer (ArthImpact Prvt ltd) Mar 2022 - Aug 2022

- Deployed the company's core infrastructure to production
- Helped the team in building and scale the fintech platform by adding requested features by product team.
- Solved a unique business problem by creating a project which stores user's bank transaction history and extracts information from it using OCR, after which it creates analytical report on that data. Front-end used data-tables + bootstrap for dynamic responsive UI For internal team to monitor the data. The app had REST API endpoints for interaction with other apps. More info on this - [Tech Behind MSME Fintech Startup ARTH](#)
- Used background jobs(sidekiq and delayed_jobs) for data-analysis and OCR in a project.
- Build the serverless lambda functions, which generates the loan risk score of a customer. Also auto involves based on the transaction history of the user.
- Created multiple scripting solutions to help tech ops team to work swiftly.
- Maintained and debugged a legacy codebase
- Collaborated with multiple vendors of company for 3rd Party integration (such as Razorpay etc).

FullStack developer (Healthgraph) Aug 2022 - Present

- Worked on providing customized form feature in different moduled In an EHR application (similar to google forms). Eg – Appointment & Admission page, Inventory Items CRUD pages
- User Time Slots Calendar for internal member use while scheduling & creating bookings which gets updated with respect to breaks
- And availability of doctors based on holidays and breaks, & auto updates max capacity of time slots.
- An interactive internal user dashbard to manage users in an org.
- Multiple third party API integrations with other hospitals and service providers such as SAP, Razropay & whatsapp integrations
- Created the API dashboard module for better outbound and inbound API logs with a very robust pagination (in house pagination approach), which beats Pagy and Kaminari in performance.
- Worked on making the EHR product tax complaint with Indian GST Code standard and worked on E-invoice registration feature using Govt API's.
- Worked on Whatsapp Notification based on multiple events such as Appointment schedule/ cancellation, Bill clearance etc
- Periodic Password Resrt feature for users.
- Worked on viewing and cloning of past patient visist's doctor Workup templates.
- Refactored legacy code and resolved issues such as N+1 queries, which were causing the application to slow down. Improved the performance and maintainability of the codebase.
- MonkeyPatched Pagy gem to support Mongoid

Personal Projects

- Vyavhar – Social media Application
 - Vyapar – E-Commerce Application
 - Injoker.py – An open source script to help you play a game called DOTA
- (ALL PROJECTS AVAILABLE ON GITHUB)
